

The Multi Purpose Mobile Terminal

The main advantage of the product is its great flexibility. A large high-resolution display with touch and softkeys offers left and right hand ergonomics. The skeye.pad POS is designed both for the presentation of complex information and at the same time to carry out highly efficient payment transactions.

The skeye.pad POS is the new generation of portable vending systems. It is based on the open platform Windows CE .NET. This open platform approach allows a high reusability of software appli-

cations across the different ticketing systems and thus provides a high protection of your investment. The skeye.pad POS is an innovative and versatile hand-held. It supports the common variations of noncash

payment and additional applications – e.g. catering, time schedule information and other functions. Third party applications can easily be integrated due to the open platform Windows CE .NET.

skeye.

The skeye.pad POS integrates all peripherals like printer, card reader – contact, magnetic stripe and contactless – in a rugged, industrialized case. A long term support from Höft & Wessel allows the customer to count on the skeye.pad POS even years after the initial investment which results in a low total cost of ownership for the skeye.pad POS compared to solutions based on consumer products.
